Why is Xplosive Edge a mandatory program for Arsenal players?

- As soccer has grown throughout the United States there is a bigger emphasis for the US to compete at the International level regardless of gender. A soccer player like any other Athlete needs to physically prepare for the Anaerobic demands that are 85%, which means a player needs to be explosive on demand. The Xplosive edge program will train our soccer players on many fronts to include Speed, Strength, Flexibility, Power, and Agility. Also incorporated within this program are Nutrition, Hydration education programs.
- Injury prevention - by increasing the individuals strength and range of Motion and agility we decrease the chances of non contact ACL in both genders by 88% “Santa Monica Sports research foundation” The commitment to our soccer players on all four components will increase their playing career and success.
